Oracle Blog Categories Monday Jun 02, 2014 Oracle introduced Auto View release 1.6.2 in May 2013. It also came with a number of enhancements for new functionality, and made many improvements to existing features. Today we are welcoming the June 2013 release of Auto View (1.6.2). The new releases enhance the presentation and functionality of Views. Check out some of our highlights below. AutoView makes it easy to review and approve changes to a view. Users can do this from a web-based user interface or even from the command line. In the web-based user interface, in the View Wizard window of Oracle Database, choose Create+Reform, and choose Reject Changes to either the entire view or a specific portion of the view. If you choose Reject Changes to the entire view, you'll have to manually approve it on the Administration Console side of our interface, and then choose Submit Changes to Reject those changes and publish the changes. In the command-line user interface, in the moddboc7 command, choose: wdk01 ajwg~1# moddboc7 -c -u -i "vicename" -r "revname" -t "target" -v -t "target1" -v "status" analogy: a -c -reject -u -r -path -v -status If AutoView is up and running, select the box next to REJECT VIEW CHANGES when you view the target from the moddboc7 output, and highlight it

Pirate Swarm is an open source space shooter, where you play as a fleet of pirates battling against other player-controlled teams. Each round of the game is divided into two phases: In the attack phase, all players join a fleet. Ships move through a randomly generated star system, and they encounter planets that have other ships in them. Those ships must be defeated before they can reach the surface of the planet. In the defense phase, all players join a fleet to battle a pirate raid. Each round starts with a large number of randomly spawned ships, and the attacker must defeat all of them before capturing the planet or retreating from the system. The pirate raider has the goal of capturing the planet. The second player to do so is the winner. Gameplay Pirate Swarm: CounterStrike: Source is a mod for CounterStrike that replaces the hitboxes with a set of alternative hitboxes. It has more than 40 levels that increase in difficulty and contains several new weapons. When the game begins, you can choose between the original version of the game or the new CounterStrike: Source mod version of the game.Gameplay CounterStrike: Source: Daedalus3D is a minimalistic raycasting engine that produces real time stereoscopic 3D without having to mess around with formats or frame rates. The engine runs in parallel on the CPU and GPU of your computer, the former serving as a normalizing influence to the latter. It uses near-zero CPU cycles, for rendering with minimal latency, and you can actually play the game with little hardware. No subsampling, no sync fences, no tearing, no fake linear frames. As the more 3D titles are becoming more open source, we decided to make this engine available under the GNU GPLv2 license, as much as we can do, and as close to the original source code as possible. 5pb.'s Danganronpa 2: Goodbye Despair is a new twist on the classic visual novel inspired by Japanese murder mystery television series. As in the original game, players must follow the dark threads of a mystery. They learn about each of the game's eight potential suspect in turn, building their own evidence of guilt or innocence. Throughout the game, players meet each of the other characters whose actions will alter the final outcome.Gameplay Danganronpa 2: Goodbye Despair: Dungeon Keeper 2: The Secret Crusade is the sequel to Dungeon Keeper 2, the Game Boy Advance game that introduced the player to the world of
